

CIL Technosoft – The Company

CIL Technosoft, incorporated in 1990 as part of the prestigious Choudhary International Group of Companies, is a IT solution provider based in Mumbai, India.

We aim to provide our clients with a competitive advantage through timely delivery of high quality and cost effective software solutions. Our investment in people, processes, infrastructure and knowledge has enabled us to achieve this goal for our diverse clientele, both domestic and international.

Our commitment to our customers has resulted in our becoming the dedicated software solutions provider for a majority of our clients.

CIL Technosoft strives to become a one-stop shop for our client's entire spectrum of software and information technology requirements. This ensures that our clients can depend on a single, reliable partner for all their IT needs instead of having to deal with multiple vendors and service providers.

Our portfolio of services includes :

- Software Development – Windows Based Application & Web Application.
- Software Maintenance.
- Turnkey Project Development.
- Product Development.
- Web Designing.
- Embedded Systems.
- Facilities Management Services
- IT Strategic Consulting.
- Onsite Contractual Development Services.

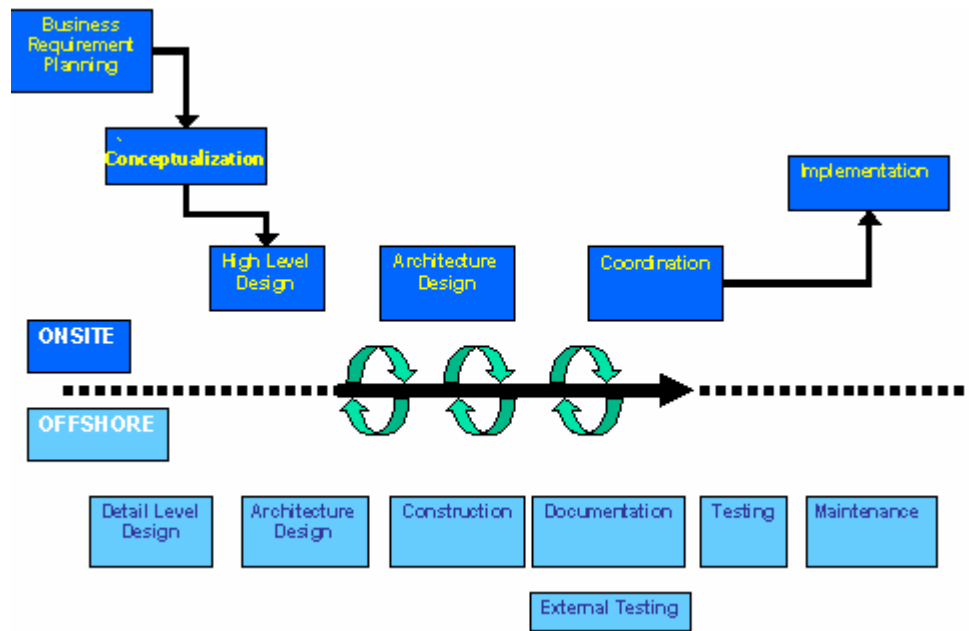

Unlike most software companies in India, which are purely service oriented, CIL takes pride in having ventured into the product space as well.

CIL offers a comprehensive range of banking and financial products designed to meet the needs of the domestic Indian banking and financial system. These products were indigenously developed by putting together a team of domain, industry and technology experts and are running live in a number of nationalized banks and financial institutions in India.

CIL has perfected the art of offshore project management, execution and delivery. CIL follows industry proven best practices to enhance communication, minimize risk and deliver on time and on budget. Our state of the art development center in Mumbai ensures that we meet the highest standards in project execution and delivery, offsite and offshore.
